

## **UMP Products Win Malaysia Commercialisation Year 2020**

Universiti Malaysia Pahang (UMP) continues to record success in commercialisation, with two products of the Commercialisation Year 2020 (MCY 2020) awards. This was announced in conjunction with the MCY Science, Technology and Innovation (MOSTI) that was held online today. The launching ceremony of the Commercialisation Year 2020 was officiated by the Minister of Science, Technology and Innovation, Yang Berhormat Khairy Jamaluddin, by a lecturer of the Faculty of Electrical & Electronics Engineering Technology (FTKEE), Dr. Ts. Mohd. Instrumen, won the Main Award for the category of Emerging Innovator. The device is a brand new innovation for workers and patients alike. The device, which can fit in the palm of one's hand, consists of a special camera for location without any contact with the user's skin. "I would like to thank the university that has provided a lot of support in this technology. "The same goes for support the Bumiputera Agenda Steering Unit (TERAJU) grant, which is part of the Scheme (SUPERB) and Technology Park Malaysia (TPM) as supporters of my business idea via the startup fund. UMP also brought home a consolation prize for the category of Research Entrepreneur with the 'Sleek Fingerprint Scanner' (UMPT), the creation of this battery-powered honey suction tool is more portable and can increase the efficiency of obtaining the honey without affecting the honey's quality. The research by Dr. Mohamad Dr. Firdaus Basri was supported by university research grants, including the MyRA Incentive Fund (University–Community Technology Commercialisation Scheme).

## Dr. Norazaliza Develops Mathematical Forecast Model

The lecturer of the Centre for Mathematical Sciences (PSM), Universiti Malaysia Pahang (UMP), Dr. Norazaliza Rosli, has developed a model for COVID-19 in the form of Graphical User Interface (GUI). This research also involves other PSM lecturers, Dr. Rosli and Dr. Noryanti Muhammad. This model was developed to monitor the evolution and predict the cumulative number of cases in Malaysia. According to Dr. Norazaliza, users will enter two input values on the screen display, namely the Movement Control Order (MCO) and the percentage of Malaysians who follow the standard operating procedures (SOP), such as handwashing with water and soap (wash), encouraged to wear face masks in public or if symptomatic, and a warning concept (warn). "After pressing the 'run the simulator' button, the pandemic projection graph will be displayed on the screen display. "The COVID-19 pandemic outbreak prediction model was built on the concept of Susceptible, Infected, Recovered, and Dead (SIRD). This research has won a gold medal in the Malaysia Technology Expo (MTE) 2020 Special Exhibition Awards held virtually on 2 November 2020.
