ITPlex 2025

DeciXion

FORGET THE CONVENTION, IT'S TIME TO INNOVATE. WE'VE DEVELOPED A COMPLETELY NEW APPROACH TO CONVENTION MANAGEMENT. ONE THAT'S DESIGNED TO BE USED BY BOTH ORGANIZATIONS AND INDIVIDUALS. IT'S THE ONLY SOLUTION THAT CAN HANDLE EVERYTHING FROM THE GUEST LIST TO THE CHECK-IN PROCESS. IT'S THE ONLY SOLUTION THAT CAN HANDLE EVERYTHING FROM THE GUEST LIST TO THE CHECK-IN PROCESS.

What is DeciXion?

DeciXion is a cloud-based convention management system that allows organizations to manage their convention events from start to finish. It provides a comprehensive suite of tools for guest registration, check-in, networking, and more.

Problems

- Traditional convention management systems are often cumbersome and difficult to use.
- Organizations struggle to manage large guest lists and complex event schedules.
- There is a lack of real-time data and analytics to track event performance.
- Guests often have a poor experience due to long check-in lines and limited networking opportunities.

Our Solution

- DeciXion provides a user-friendly interface for both organizers and guests.
- It offers a comprehensive suite of tools for managing every aspect of the convention process.
- Organizations can track event performance in real-time and make adjustments as needed.
- Guests can enjoy a seamless check-in process and access a wide range of networking opportunities.

Novelty

- DeciXion is the only convention management system that offers a mobile app for guests.
- It provides a comprehensive suite of tools for managing every aspect of the convention process.
- Organizations can track event performance in real-time and make adjustments as needed.
- Guests can enjoy a seamless check-in process and access a wide range of networking opportunities.

DeciXion's Product 3

Feature	Benefit	Impact
Guest Registration	Streamlined process	Reduced wait times
Check-in	Mobile app	Seamless experience
Networking	Real-time data	Increased engagement
Event Analytics	Comprehensive reporting	Improved decision-making

Marketability & Commercialization

- DeciXion is a scalable solution that can be used by organizations of all sizes.
- It offers a comprehensive suite of tools for managing every aspect of the convention process.
- Organizations can track event performance in real-time and make adjustments as needed.
- Guests can enjoy a seamless check-in process and access a wide range of networking opportunities.

Achievement

- DeciXion has been recognized as a top innovation in the convention management space.
- It has been used by leading organizations in various industries.
- Organizations can track event performance in real-time and make adjustments as needed.
- Guests can enjoy a seamless check-in process and access a wide range of networking opportunities.

Publications

- DeciXion has been featured in industry publications and news outlets.
- It has been used by leading organizations in various industries.
- Organizations can track event performance in real-time and make adjustments as needed.
- Guests can enjoy a seamless check-in process and access a wide range of networking opportunities.

Exhibition booth setup featuring a laptop displaying the DeciXion interface, a tablet, and promotional materials on a white counter.

UMPISA researcher Ts. Dr. Ahmad Taufik develops DeciXion, a smart solution to help organisations make strategic decisions systematically

11 August 2025

PEKAN, 8 August 2025 – Observing the difficulties faced by many organisations in making strategic decisions, a research led by a lecturer from the Faculty of Industrial Management (FPI), Universiti Malaysia Pahang Al-Sultan Abdullah (UMPISA), Ts. Dr. Ahmad Taufik Nursal has produced DeciXion, a web-based Decision Support System (DSS) developed using the Fuzzy TOPSIS analysis method.

This research also received collaboration from a group of lecturers from Universiti Malaysia Perlis (UniMAP), Dr. Tisya Farida Abdul Halim, a lecturer from Universiti Utara Malaysia (UUM), Professor Sr. Dr. Mohd Nasrun Mohd Nawawi, FPI lecturers Dr. Khairunnisa Abdul Aziz, Dr. Nurul Ashykin Abd Aziz, Ts. Dr. Noor Akma Abu Bakar, and Dr. Zarith Sufia Azlan.

According to Ts. Dr. Ahmad Taufik, among the difficulties faced by many organisations are too many alternatives to choose from, the existence of various criteria that need to be considered simultaneously, which sometimes conflict, as well as the use of subjective data that is difficult to assess accurately.

“More worryingly, this selection process is still largely done manually or relies on intuition or experience.

“These challenges inspired the development of DeciXion, a more systematic, transparent, and data-driven decision support system,” he said.

This research began in 2023 and is expected to be fully completed in 2025, under the Fundamental Research Grant Scheme (FRGS) titled ‘A Hybrid Multi-Attribute Decision Making and Sentiment Analysis Method for Residential Housing Project Purchases’.

He added that DeciXion is an additional output derived from this research.

“Through the Fuzzy TOPSIS method, DeciXion allows users to break down complex problems into smaller components, assess the importance of criteria and alternatives more accurately, and combine quantitative data and expert opinions in a single analysis system.

“This system makes it easier for users to enter data, set criteria, and subsequently generate decision reports automatically.

“This is what makes the process faster, more evidence-based, and transparent,” he said.

In addition, he stated that the main objective of developing DeciXion is to help organisations replace subjective decision-making approaches with more systematic, analysis-based ones.

“It can solve various issues in the industry, such as vendor selection, resource optimisation, technology selection, and strategic planning.

“This way, organisations can reduce the risk of inconsistent decisions and increase confidence in the decisions made.

“This project also received industry collaboration through NM Rich Enterprise, a local real estate company,” he said.

As a web-based system, the cost of using DeciXion depends on the scale of usage, additional modules, and the need for integration with existing systems.

What is DeciXion?

Forget the confusion, it's time for clear, informed decisions with DeciXion, your intelligent, next-generation decision support software for business strategy and resource optimization. Say goodbye to gut feelings and scattered spreadsheets. DeciXion empowers your decisions with FUZZY TOPSIS, a powerful multi-criteria analysis tool that blends expert judgment and data into a single, transparent platform. From vendor selection to strategic planning, DeciXion brings logic, clarity, and confidence to every choice, your trusted partner in making smarter, faster, and sharper decisions.

Problems

Businesses struggle with strategic decisions due to scattered data, subjective judgments, and the lack of intelligent support tools. Relying on intuition or incomplete information often leads to inconsistent results and missed opportunities. The challenge grows when multiple alternatives and conflicting goals are involved. Traditional tools fail to manage uncertainty, prioritize options, or support stakeholder collaboration, hindering transparent and data-driven decision-making.

Our Solution

- Web-based decision support platform tailored for businesses seeking clarity in complex decision-making processes.
- Equipped with a fuzzy TOPSIS as analytic model
- Allows for a flexible number of criteria and alternatives
- Facilitates collaborative decision-making

Novelty

- A comprehensive and new approach for the evaluation of selection problem
- Break down complex decision problems into clear, manageable components
- Evaluate the importance of criteria and alternatives with precision
- Integrate insights from data, experts, and stakeholder input seamlessly

DeciXion Vs Product X

Characteristic	DeciXion	Product X
Decision Method	Fuzzy TOPSIS	SWT
Uncertainty Handling	Yes	No
Input Complexity	Low	High
Scalability	High	Low
User Flexibility	High	Low
Interface	Modern	Outdated

Marketability & Commercialisation

SMEs, University, and Government agencies and corporations involved in strategic planning and procurement

What Next?

DeciXion 1.0	DeciXion 2.0
Fuzzy TOPSIS	Hybrid decision methods
Manual input	Automated
Ranking with Excel	Self-optimization
None	Enhanced with AI
None	Personalized reports

He further added that his research team also plans to improve the user interface to be more user-friendly, strengthen integration with big data and predictive analytics, and expand its use to the government, education, health, and real estate sectors.

“DeciXion also has the potential to be widely commercialised as a local platform capable of

competing internationally.

“Not only for industrial use, DeciXion also serves to assist the academic community, especially postgraduate students in the field of Operations Research (OR) and Multi-Criteria Decision Making (MCDM).

“It provides a practical platform for testing decision models, facilitates thesis writing and journal publication, and saves time in building analysis models,” he said.

Before DeciXion was developed as a web-based system, the research team had produced an early version in the form of Fuzzy TOPSIS using Microsoft Excel.

Several of their studies have also been published in Scopus-indexed journals related to the selection of Building Information Modelling (BIM) software.

In terms of recognition, the combination of the DeciXion system with the sentiment analysis approach as a decision model in addressing home ownership issues successfully won the Management Special Award as well as a Gold Medal at the Creation, Innovation, Technology and Research Exposition (CITREX) 2024.

This recognition was obtained from the early version of the system developed using the Microsoft Excel platform, before it evolved into a more comprehensive and technology-based system.

Meanwhile, at CITREX 2025, DeciXion won the Strategic Business Management Innovation Award.
